

BUCKETS

NYE has been in the custom bucket business for over half a century; building only premium quality buckets using the finest materials and craftsmanship. Buckets are available in both regular and long-lead "services bucket" patterns and four weight classes;

HP - A new High Performance bucket class designed to boost production. NYE HP buckets are built with heat-treated alloy steels that are super strong yet lightweight for faster cycle times - ideal for basement contractors.

GP - NYE General Purpose buckets are designed for mosr digging conditions including light shale and rock. Customers often call our GP buckets "heavy duty".

HD - NYE Heavy Duty buckets are designed for moderate to severe rock and shale applications where extra impact and abrasion resistance is required.

UH2 - Ultra Heavy Duty - This is our killer second generation rock and demolition bucket designed for the most demanding applications in granite, shale, coral, etc.

UH2 BUCKET

- Extra thick T1 plates.
- Straight lip.
- Optional hard facing

UH2 BUCKET (With Armor)

- Super strong construction.
- Equipped with optional carbide armor.

HD BUCKET

- Thicker materials, Extra reinforcing throughout.
