

Bucket Accessories

The right bucket accessory can make your equipment more efficient and your job easier. National Attachments will bring the right accessory for the right job.

Bolt-on Cutting Edge. Bolt on cutting edges (shown) extend the life of a bucket by adding a wear edge to the front of the bucket. Bolt on edges have a double bevel, so they are reversible, extending the life of the edge itself. Various thickness and width options are available to fit your bucket exactly.

Toothbar. Designed for most buckets, toothbars allow easier penetration into hard, compacted materials. Standard and heavy-duty versions available.

Teeth. Bolt on teeth are available for buckets that are drilled for them (two holes per tooth are required). Weld on teeth are also available to turn your bucket into a digging machine.

Replacement Parts. Parts are available for all of the above mentioned accessories such as replacement tooth points or shanks.

EXCAVATOR BUCKETS

Compact excavator owners and operators can choose from a variety of bucket styles and sizes designed to fit any compact excavator perfectly!

General Purpose Bucket

These buckets are available in many sizes for virtually any compact excavator or backhoe. Includes teeth (number varies with bucket size) that are pin-on replaceable.

Tilting Bucket

The tilting bucket for excavators will tilt hydraulically up to 45° in either direction.

Ditch Cleaning Bucket

This is a wide bucket that has a straight cutting edge (no teeth), and is great for ditch cleaning. Holes in the sides of the bucket allow water to drain out while keeping dirt and other material in the bucket.

Excavator Buckets

Compact excavator owners and operators can choose from nearly 200 models of excavator dedicated buckets. Options include ditching, general and tilting buckets.

Bucket Accessories

The right bucket accessory can make your equipment more efficient and your job easier. Accessories like the 3-in-1 Edge, Bolt-on Cutting Edge and Toothbar are perfect for breaking into compacted soil or other hard materials.

In addition to to the above accessories, we also have available: Spill Guards, Replacement Toothbar Points, Bolt-On Toothbars, Teeth and Weld-On Tooth assemblies with cutting edges.

3-in-1 Edges. These edges are made of a thinner, yet stronger material. In addition, they eliminate the need for both normal bolt-on edges and toothbars, thus adding 100-300 lbs. of capacity back to your machine, back-drag dirt where you want it and break up large dirt clods. Also collects unwanted debris for easy removal.

Bolt-on Cutting Edge. For more digging power, Bolt-on Teeth are designed to fit EDGE buckets that are drilled for them. Contact **NA** to check on the correct fit for other bucket brands.

Toothbar. Standard toothbars have 1" shanks with replaceable points, and heavy-duty toothbars have 1.5" shanks with replaceable points. Either way, you get easier penetration into hard, compact materials.
