This fast-track project involved the removal of 900 loads of processed concrete within a four-week period. Steel buildings, exterior sheathing, and roofing materials all had to be loaded out as well.

John said the NYE digital pulverizer gave his operator, John Robinette II, "the expertise of a surgeon." John II liked the massive size and strength of the NYE attachment.

"We've had several other brands but this one is the best one we've ever owned.

It handled the 3-ft. grade beams with ease," he said.

After 30 days of continuous use on the project the pulverizer showed absolutely no wear. "This ripper makes things so much easier! The NYE digital pulverizer speeds up the process," said John. "Bidding a job using this tool gives us a distinct advantage. I wouldn't change a thing with it. It will definitely play a major role in the way we do our business."
