NYE Extreme Service Digital Concrete Pulverizer: Patented Ripper Feature Puts NYE and National Attachments Inc. as the Industry's best.

Gorham ME, January 18, 2007 – National Attachments Incorporated is proud to introduce a new level of extreme performance. Experience the Extreme Service Digital Concrete Pulverizer. This NYE manufactured tool crushes pre-cut cast or cast-in place concrete, asphalt, rock, pipe, decking, and airport tarmac and is ideal for in-place demolition or implosion clean-up.

The patented four positioned ripper provides superior maneuverability, operating much like a human index finger, yet has the power to rip, pry, manipulate, sort, and position any material. "Convertible" with a live back jaw to increase crushing forces, this tool was designed to process concrete of all forms. The integrated ripper feature enables the machine operator to easily stand on edge horizontally positioned concrete, and pulverize efficiently from top to bottom, drastically cutting time and operational costs. The operator can also manipulate material from the rubble pile and quickly square it to the pulverizer jaws for instant crushing.

Custom fabricated with 100,000psi quenched and tempered multi-alloy Swedish steels with hardened pins and bushings throughout, this Extreme Service Pulverizer is designed to withstand the toughest applications possible.
