**NYE Extreme Service Stump Harvester:** Setting the New Standard for Cost Efficient, Maximum Output Material Handling.

Gorham ME, December 12, 2006 – National Attachments Incorporated is proud to introduce the new one-man, one-machine, wood-handling tool of the future.

The NYE manufactured Extreme Service Stump Harvester brings the multi-man, multi-attachment tasks of excavating, pre-splitting, stockpiling, and loading to a one man, one machine operation.

It can rip, pry, clean, split, and sort all at the hands of one operator and all with the perfected craftsmanship of this extreme service utility tool.

Using combinations of quenched and tempered multi-alloy Swedish steels this Stump Harvester is designed to endure decades of the toughest applications possible. With its signature, operator-sided knife positioning, this Extreme Service Stump Harvester grants superior visibility and optimal blade positioning for all applications.

Remove dirt and rocks from stumps to enhance the grinding process with massive grubbing tines ideal for in-place harvesting, and maximize your grinder/shredder productivity as this Multi-Functional tool produces a uniformly cut product out of any species of wood.

For more information call 1-800-839-9981 or e-mail
